

Press release

Epsis (US) and Synergy^{AV} Inc. finalize strategic partnership

*“The demands of Collaboration require us to have the best partners”
Andrew Gordon, Vice President, North America*

Houston, Texas, October 7, 2010:

Epsis (US), a leader in developing modern technology and services for integrated operations within the oil and gas industry, today extended its market visibility by announcing a strategic partnership with Synergy^{AV} Inc. (Houston, Texas).

The agreement sets the stage for Epsis to build on a stream of successful market cases providing cost effective collaboration tools and to become the solution of choice for scheduled enterprise collaboration expansions taking place throughout 2011.

“We believe in simplifying collaboration through innovative solutions” says Andrew Gordon, Vice President, North America. “Our ambition is to set the standard for collaborative solutions within the oil and gas industry as well as other market segments, to create content within our clients’ collaborative work processes, and to enable personnel work better together”.

In April 2007 Epsis opened its US office in Houston, Texas, highlighting the increasing application of integrated operations across the North American E&P sector.

“Our US office has helped us extend the strong relationships we have established with companies in North America”, Gordon says. “Our experience within integrated operations can be applied in the varied oil and gas environments found across the continent. We can connect people with information, whether they are producing from deepwater fields in the Gulf of Mexico, maintaining 1000-well onshore fields in California or developing new assets in remote parts of Alaska”.

Epsis staff participates in a wide range of international events related to the oil and gas industry. These events provide opportunities for demonstrating the value of Epsis’ products and services, to gauge user opinion and to explore possibilities for collaboration with existing and potential industry partners.

“We will continue to team up with strategic partners and resellers to penetrate the enterprise market segments in and out of the oil and gas industry”, Gordon states. “Epsis’ mission is to see our solutions contribute to our clients’ value creation by improving the way we all work”.

About Epsis

Epsis provides modern technology and services for integrated operations within the oil and gas industry. We focus on a key component for the implementation of integrated operations - namely collaboration. With our TeamBox solution, we help the world's leading oil and gas companies increase their efficiency and revenue. For more information, please visit <http://epsis.no>
